APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT (Effluent)

THIS APPLICATION is to be filed with the Director of Pollution Control, Parliament Buildings, Victoria, B.C. V8V 4S5.

Any person who qualifies as an objector under section 16 of the *Pollution Control Act* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or where service is required, within 30 days of serving a copy of the application, file with the Director at the above address an objection in writing to the granting of a permit, stating the manner in which he is affected.

Preamble—The purpose of this application is to gain approval for (1) the use of a Clivus Multrum composting system for treatment of organic kitchen and toilet wastes, and (2) a spray irrigation system for the treatment of greywater.

C & L Partnership, 4715 Chapel Road NW., Calgary, Alta. T2L 1A7, hereby applies to the Director for a permit to discharge effluent from Fernie Mountain Resort located on Burma Road, Fernie, onto forage crop land, and gives notice of application to all persons affected.

The land upon which the works are located is that part of District Lot 5455 lying north of Plan 1613, Kootenay District.

The discharge shall be located at lagoon just north of clearing on west side of Burma Road; irrigation field will be the clearing immediately east of Burma Road (north of existing house and buildings).

The quantity of effluent to be discharged is as follows: Average daily discharge (based on operating period) (based on 80% occupancy), 5,800 gallons from resort lagoon, 13,800 gallons from lagoon to field. Maximum daily discharge (based on 100% occupancy), 7,200 gallons from resort to lagoon, 17,300 gallons maximum averaged daily discharge from lagoon to field.

The operating period during which the effluent will be discharged is intermittently over the period May 1 to September 30.

The characteristics of the effluent discharged shall be equivalent to or better than as follows: Historical data are not available for greywater characterization

after lagoon retention and aeration. Since more than 60% of the BOD and suspended solids originate from toilet and food wastes, and 100% of the coli originate from toilet wastes, and since these sources are treated by the Clivus system, the initial levels in greywater would be much less than combined wastewater. The effect of time and aeration would reduce these parameters to an inconsequential level.

The type of treatment to be applied to the effluent before discharge is as follows: Lagoon retention and aeration prior to surface irrigation. Organic wastes will be composted by Clivus Multrum system prior to being applied to the forage crop lands as soil conditioner.

This application, dated on October 8, 1980, was posted on the ground in accordance with the Pollution Control Regulations.
